MEDICATIONS DURING PREGNANCY

During pregnancy, it is common to experience trouble with constipation, heartburn, minor upper respiratory illness (the common cold), and other types of infections (gingivitis, urinary tract infections, etc.)

The following is a short list of medications which are approved for use during pregnancy. Any medication which is not on this list is not necessarily unacceptable or contra-indicated. For any medication not found on this list, it is best that you call your doctor’s office and ask for advice regarding its use.

**Stool softeners (to combat constipation)**
- Metamucil
- Colace
- Bulk agents – fiber products (Fibercon, etc.)

**Antacids (for heartburn)**
- Mylanta II
- Maalox Plus
- Riopan or Riopan Plus
- Generic antacids
- TUMS
- Rolaids

**Antifungal Agents**
- Monistat
- Gyne-Lotrimin
- Femstat

**Pain Relievers**
- TYLENOL

**Antibiotics (assuming no allergic reactions)**
- Penicillin
- Erythromycin
- Cephalosporins

Nitrofuratoin or Macrodantin (first and second trimesters)

**Common Cold Remedies**
- Robitussin
- Robitussin DM
